# Foreword

Dying well wherever you are and whatever your background or circumstances are fundamental aspects of human dignity. As part of a compassionate humane society, we need to do everything we can to make sure that people who are facing their last months, weeks and days of life receive the best possible palliative and end of life care. Those who care for them, including their families, others important to them and staff around them, equally deserve this consideration and support.

As co-chairs of the Ambitions Partnership, we are delighted that the Ambitions for Palliative and End of Life Care Framework has been applied to the context of the prison setting and interpreted as a Charter. To our knowledge, this is the first time anywhere in the world that the principle of equity has been applied in such a practical way. This is truly a remarkable first.

The articulation of a set of standards, which are a set of guidelines setting out best practice, underpin each of the six ambitions and the development of a self-assessment tool to use alongside it has the potential to make a huge difference. Our shared vision is: *'I can make the last stage of my life as good as possible because everyone works together confidently, honestly and consistently to help me and the people who are important to me, including my carers'*. No matter where any prison is on the trajectory towards that vision, they will be able to use this Charter and self-assessment tool to help them continuously improve.

We recognise that the custodial environment is different to other settings in which clinical care takes place, and that providing the best possible end of life care in prison is complex and challenging. It is precisely because of that that we welcome this publication so enthusiastically.

We would strongly encourage commissioners, leaders, staff and supporters of prison services to read this and, more importantly, use it to help them in their endeavours to improve the way in which each person can live and die well in custody.

**Prof Bee Wee**

National Clinical Director of End of Life Care

NHS England

Co-Chairs of the Ambitions for Palliative and End of Life Care Partnership

**Dr Jane Collins**

Chief Executive Officer

Marie Curie, UK

# Introduction

It remains a contentious position that anyone should experience a planned death in prison. However, for some individuals compassionate release to alternative premises in which they can end their life is either not possible or unwanted and therefore there is a requirement that those individuals who do have a planned death in a custodial setting experience the highest standards of care.

In the community close friends and family are key and central to the individuals care yet in the prison environment are often forgotten or their role misunderstood when planning end of life care. Also, the support for close ones is key to the holistic care of the individual.

Many of the people in prison who are coming to the end of their life have been in prison for a number of years and are surrounded by staff and fellow prisoners with whom they are comfortable. The staff may well have been a consistent presence in their lives during their period of custody and their peers are their friends and support.

It is for these reasons that I truly welcome this Dying Well in Custody Charter. The Charter mirrors the Ambitions for Palliative and End of Life Care and provides a framework for establishments to act, help and support all staff who are involved in the care of an individual preparing to die, many of whom will not have experienced supporting an individual in their planned death. This framework provides a set of standards sitting underneath 6 statements of Ambition which place the individual at the centre of the care being planned and delivered.

The Ambitions and Standards in the Dying Well in Custody Charter ensure that care is co-ordinated across the establishment and supports all staff being able to achieve a level of competence and confidence in delivering professional care to these individuals with dignity and calm. End of life care is enormously important for the individual being cared for as it is for their friends, families and carers. It is the last thing that can be done for a living person and it is critical that it is done well. This Dying Well in Custody Charter enables those involved in caring for individuals to manage this event with compassion, inclusivity and ensures that there is dignity in the death irrespective of their place of death.

**Kate Davies OBE**

Director of Health & Justice, Armed Forces and Sexual Assault Referral Centres (SARCs) NHS England

# Implementation Guide - Preparing for Self-Assessment

The following ACT & ADOPT checklist provides some suggestions to support the implementation of the Dying Well in Custody Charter (DWiCC) and self-assessment process.

A

## Acknowledgement

- Secure organisational support for the implementation of the DWiCC across the prison estate
- Acknowledge that the DWiCC aligns with the National Framework Ambitions for Palliative and End of Life Care and that each establishment needs to consider how and when to implement the charter.

C

## Communication

- HMPPS, HealthCare Commissioners and Providers to advocate implementation of the DWiCC in support of the National Framework Ambitions for Palliative and End of Life Care

T

## Tactics

- Develop and agree an overarching dissemination plan e.g. Senior Leaders Bulletin, Intranet, Learning Bulletins

## Implementation Guide - Preparing for Self-Assessment *Continued*

### A

#### Adoption

- Agree formal adoption of the DWiCC and self-assessment with the establishments Senior Management Team
- Discuss and promote the benefits of adopting the DWiCC with key stakeholders including: service improvement aligning with PPO, CQC, HMIP and commissioner's expectations
- Identify an establishment and healthcare lead; agree who should be included in the self-assessment team ensuring healthcare and operational representation, partner organisations could be involved e.g. Hospice, specialist palliative care staff
- Consider making adoption and self-assessment an establishment priority and agree timescales for implementation.
- Allocate time for self-assessment e.g. one working day or hours per week
- Review the self-assessment tool including evidence required – it is indicated who should take the lead in producing the evidence required – Health, Prison, Joint
- Consider collating evidence in one place to demonstrate self-assessment and on-going review to visiting inspection teams
- Carry out self-assessment process, rate achievement against each ambition using the RAG scale; Red – *to achieve*, Amber - *working towards*, Green - *achieved*
- Develop an action plan with agreed dates for review
- Consider liaising with other establishments to share best practice
- Consider as a minimum annual self-assessment

### D

#### Dissemination

- Develop a communication strategy appropriate to the establishment which ensures inclusion of all staff, prisoners and external partner agencies.

## Implementation Guide - Preparing for Self-Assessment *Continued*

O

### **Organisational Issues**

- Identify any enablers or barriers to implementation.
- Identify resources to support enablers and address the barriers

P

### **Policy / Procedure Revision**

- Identify which policies and procedures require review e.g. end of life care policy, open cell door, medication management

T

### **Training**

- Identify existing training / knowledge gaps in palliative end of life care for all staff groups (operational and healthcare staff) and prioritise relevant groups e.g. nursing teams, FLOs, Safer Custody staff, operational staff working with individuals on the palliative and end of life care register.

# Ambition 1: Each person is seen as an individual

**I Statement:** *I and the people important to me have opportunities to have honest, informed and timely conversations and to know that I might die soon. I am asked what matters most to me. Those who care for me know that and work with me to do what's possible.*

Standard	Evidence		Lead
<p><b>A:</b> Each prison will treat an individual with dignity and respect.</p>	<ol style="list-style-type: none"> <li>Evidence that the prison has Palliative End of Life Care Guidance for all involved in the care of the individual. Guidance should be compliant with NICE standards.               <ul style="list-style-type: none"> <li><a href="https://www.nice.org.uk/guidance">https://www.nice.org.uk/guidance</a></li> <li><a href="https://www.nice.org.uk/guidance/ng31">https://www.nice.org.uk/guidance/ng31</a></li> <li><a href="#">Safer Custody Bulletins</a></li> </ul> </li> <li>Evidence the individual is offered the opportunity to discuss advance care planning and any documented preferences are reviewed with the individual.</li> <li>Evidence that those who care for and manage individuals on the palliative end of life care register are aware of any advance decisions.</li> <li>Evidence the establishment seeks stakeholder feedback relating to the development and provision of palliative end of life care.</li> </ol>		<p>Joint</p> <p>Health</p> <p>Health</p> <p>Joint</p>

# Examples of Evidence

Here are some examples of evidence, the list is not exhaustive, and establishments may identify others relevant to their own practice

- Policies - Guidance - Standard Operating procedures
- Palliative and end of life care register – complex case register
- Social Care Register – care plans – Continuing Healthcare Assessment
- Advance Decision – DNACPR Documentation
- Wing Books and Logs
- FLO logs
- Staff Training registers
- ERCG – ROTL Documentation
- Care Plans
- MDT Terms of Reference- Minutes
- Patient leaflets
- SystmOne – CNOMIS
- Key Worker system – patient information leaflets
- Palliative Care Information Folder
- Shared Drive
- Supervision records (number and type of sessions offered/attended)
- Duty rotas, appraisal/PDP, staff discussion
- Discussions with Healthcare – Nurses –Doctors - Administration Staff - Social Care Staff – Chaplaincy – IMB - Palliative Care Leads – Health and Prison Staff – Safer Custody – Officers – FLO – palliative care champions - patients and prisoners - Specialist Palliative Care teams - Mental Health team - Family Significant others
- Questionnaires – Audit Results
- Focus groups
- Education Sessions

# Glossary of Terms

**Advance Care Planning (ACP):** is a voluntary process of discussion about future care between an individual and their care providers, irrespective of discipline. An ACP discussion might include:

- the individual's concerns and wishes,
- their important values or personal goals for care,
- their understanding about their illness and prognosis,
- their preferences and wishes for types of care or treatment that may be beneficial in the future and the availability of these.

(Advance Care Planning: a Guide for Health and Social Care Staff NHS End of Life Care Programme, published February 2007, revised August 2008)

**Advance decision:** In the Mental Capacity Act this applies specifically to an advance decisions to refuse treatment (ADRT) - see below

**Advance Directive/Advance Decision/Advance Decision to Refuse Treatment (ADRT):** This is a decision to refuse specified treatment made in advance by a person who has capacity to do so. This decision only applies at a future time when that person lacks capacity to consent to, or refuse, the specified treatment. This is set out in section 24 (1) of the Mental Capacity Act. Specific rules apply to advance decisions to refuse life-sustaining treatment.

- An advance decision to refuse treatment can be made by someone over the age of 18 who has mental capacity;
- is a decision relating to refusal of specific treatment and may also include specific circumstances;
- will only come into effect if the individual loses capacity;
- only comes into effect if the treatment and any circumstances are those specifically identified in the advance decision;
- can be verbal, but if an advance decision includes refusal of life sustaining treatment, it must be in writing, signed and witnessed and include the statement 'even if life is at risk';
- is legally binding if valid and applicable to the circumstances.

**Advance Statement:** a statement that conveys a person's preferences, wishes, beliefs and statement values regarding their future care. The aim is to provide a guide to anyone who might have to make decisions in the person's best interest if that person has lost the capacity to make a decision

**Best interests (in the context of patients lacking capacity to make a particular decision):** Any decisions made, or anything done for a person who lacks capacity to make specific decisions must be in the person's best interests. The Mental Capacity Act 2005 (England and Wales) sets out how a best interests decision should be made. Any staff involved in the care of a person who lacks capacity should make sure a record is kept of the process of working out the best interests of that person for each relevant decision.

**Mental Capacity:** The ability of an individual to understand the issues of a decision, retain that information, weigh up the facts and communicate their decision. Capacity must be assumed in all individuals unless there is a suspicion of an impairment or disturbance of mind or brain. In this situation, capacity for that decision must be tested (see MCA 1&2 form in the resources section of the *Deciding Right* website). A person with capacity can make any decision they wish, even if others view that decision as illogical or unwise. Capacity is specific to the decision being made - therefore an individual can have capacity for one decision, but not another. If an individual lacks capacity for a specific decision, carers must make the decision following the best interest's requirements of the Mental Capacity Act (see MCA1&2 form in the resources section of the *Deciding Right* website).

**Do not attempt cardiopulmonary resuscitation (DNACPR):** A decision to withhold CPR in the event of a future arrest. Communication is a key part of making such a decision. Consent to refuse CPR is required if the individual has capacity for that decision *and* an arrest is anticipated *and* CPR could be successful. A DNACPR form is completed by a clinician with responsibility for the child, young person or adult. A DNACPR decision can be made for an individual who does not have capacity but must follow the best interest's requirements of the Mental Capacity Act.

**End of Life Care:** Patients are 'approaching the end of life' when they are likely to die within the next 12 months. This includes patients whose death is imminent (expected within a few hours or days) and those with: a) advanced, progressive, incurable conditions; b) general frailty and co-existing conditions that mean they are expected to die within 12 months; c) existing conditions if they are at risk of dying from a sudden acute crisis in their condition; d) life-threatening acute conditions caused by sudden catastrophic events. In General Medical Council guidance the term 'approaching the end of life' also applies to those extremely premature neonates whose prospects for survival are known to be very poor, and to patients who are diagnosed as being in a persistent vegetative state (PVS) for whom a decision to withdraw treatment may lead to their death.

**Family Liaison Officer:** Is a member of prison staff who will act on behalf of the governor following a death in custody, a prisoner becoming critically ill and/or receiving a terminal diagnosis and on other occasions where supporting a family is required. Provide immediate appropriate information to the family concerning the death of their relative or other person. Offer to attend the funeral and act as the named point of contact for the family they have been assigned, managing the day-to-day partnership between the prison and the family before and after the inquest. Support families leading up to and during the inquest and offer support, practical help and advice. They will also liaise with other key agencies.

**Guidance:** this refers to local instructions issued to assist staff in the delivery of palliative end life care. These can be both clinical and operational.

**Holistic Care:** takes all of the individuals needs into consideration. This will include physical emotional psychological spiritual needs.

**Key Worker:** A qualified Nurse who, with the patient's consent and agreement takes a key role in co-ordinating the patient's care, promoting continuity, ensuring the patient knows who to access for information and advice.

**MDT:** Multi-Disciplinary Team – the core MDT would usually comprise key workers, palliative care leads, safer custody, chaplaincy, FLO, GP, the individual and their residential manager. Although grade is not important there needs to be involvement from people with authority to make decisions.

**Open Cell Door:** A process to assess when up to 24-hour healthcare staff access is required to the individual's cell to meet individual healthcare needs. For example, to provide end of life care or when a syringe pump is in use.

**Palliative Care:** Palliative care is an approach that improves the quality of life of patients and their families facing the problem associated with life-threatening illness, through the prevention and relief of suffering by means of early identification and impeccable assessment and treatment of pain and other problems, physical, psychosocial and spiritual. Palliative care provides relief from pain and other distressing symptoms; affirms life and regards dying as a normal process; intends neither to hasten or postpone death; integrates the psychological and spiritual aspects of patient care; offers a support system to help patients live as actively as possible until death; offers a support system to help the family cope during the patient's illness and in their own bereavement; uses a team approach to address the needs of patients and their families; enhances quality of life and may also positively influence the course of illness; is applicable early in the course of illness, in conjunction with other therapies that are intended to prolong life, and includes those investigations needed to better understand and manage clinical complications. Palliative care can be provided by a range of health and social care staff and may be done alongside treatment intended to reverse particular conditions.

**Palliative End of Life Care Register:** A register of patients with supportive palliative and end of life care needs. The register identifies both cancer and non-cancer patients who may be in the last year of life.

**Preferred place of Care:** The individuals preferred place of care and death.

**Permitted place of care:** The place the individual is allowed to be care for following risk assessment and multidisciplinary discussion

**Person Centered Care:** A term for healthcare and social services which reflect the individual's unique preferences, values and needs, identified and agreed upon in partnership with the individual.

**Specialist Palliative Care:** The active total care of individuals with progressive, advanced disease and (of) their families, care is provided by a multidisciplinary team who have undergone recognised specialist palliative care training.

**Stakeholder:** may be patients, caregivers, clinicians, prison staff, researchers, advocacy groups, professional societies, businesses, policymakers.

# Acknowledgements

The members of the Community of Practice Steering Group would like to thank all those involved in the development of the Dying Well in Custody Charter and self-assessment tool. In particular we would like to thank representative from numerous prisons and palliative care organisations across the country who attended Macmillan Community of Practice events, sharing knowledge, experience and a passion to improve palliative and end of life care in the custodial environment.

We are also very grateful for the support and endorsement provided by the Ambitions Partnership, NHS England and Her Majesty's Prison and Probation service. Particular thanks are extended to Professor Bee Wee for her recognition and support in developing the Charter and seeking endorsement from the Ambitions partnership.

We would also like to thank HMP Wakefield and HMP Littlehay for their involvement and valuable feedback during the pilot process.

We would also like to acknowledge gratefully the help of those residents who attended focus groups in HMP Low Newton and HMP Wymott, and provided an invaluable perspective to support development of the Charter. Thanks also to HMP Wymott for their support in the production of Dying Well in Custody Charter and Self-assessment tool.

Finally we would like to thank Macmillan Cancer Support for their support in enabling and contributing to the Macmillan Community of Practice for Health and Justice End of Life and Palliative Care.

## Members of the Community of Practice Steering Group included:

- Gill Scott Macmillan Palliative End of Life Care Lead North East Prisons, County Durham and Darlington FT
- Fiona Grossick National Clinical Quality Lead Nurse Health and Justice
- Sarah Whyte Macmillan Project Lead for Palliative and End of Life Care HMP Stafford Staffordshire and Stoke on Trent Partnership Trust
- Sue Rafferty Intervention Manager Palliative Care Lead HMP Frankland
- Nicola Spencer Programme Support Manager End of Life Care NHS England
- Mick Butler Custodial Manager End of Life Care Lead Officer HMP Wymott
- Annelise Matthews Consultant in Palliative Medicine Sue Ryder Hospice
- Nigel Jones Equity and Diversity Lead HMP Littlehay
- Annette Edwards Consultant in Palliative Medicine Leeds Teaching Hospitals NHS Trust / Sue Ryder
- Vikki Levick Equality, Rights and Decency Group National Offender Management Service
- Jacqui Hallam Macmillan Learning and Development Manager North England
- Lorraine McBride Macmillan Project Lead for Palliative and End of Life Care in Prisons Compton Hospice
- Lily Beckwith Senior Nurse Palliative Care Lead HMP Low Newton
- Helen Parker Head of Medical Operations Spectrum Community Healthcare CIC North East Prisons
- Rebecca Daddow Macmillan PABC Leadership and Support Programme Lead
